MediScribe

A Smarter Way for Independent Practitioners to Grow

Team Name: RIE_S6_3_MANDANMARS

Team members: Prakhar Sharma (79944 54919), Akhil KV (8848673275), Adithya B (80892 83909)
Department: Computer Science Engineering
College: Rajadhani Institute of Engineering and Technology

NotebookLM

THE PROBLEM

Independent and small-scale medical professionals lack the tools to organise, digitalize, and manage their practice efficiently.

They rely on physical paperwork, scattered files, and fragmented tools — leading to lost records, wasted time, and reduced patient care quality.

NotebookLM

OUR SOLUTION

MediScribe is an all-in-one digital platform that helps independent doctors manage patient records, journal references, clinic scheduling, and quick notes — entirely within their personal device, online or offline.

NotebookLM

How It Works

SCHEDULE

and manage patient appointments

SEARCH

and retrieve reports, theses, and journal records using a simple text prompt

STORE

patient and case data in one unified place for easy future reference

NotebookLM

INPUT & CAPTURE METHODS

SPEECH-TO-TEXT — Dictate notes hands-free during or after consultations

TEXT TYPING — Standard keyboard input for detailed notes

DOODLE / STYLUS — Freehand drawing and annotation, similar to MS OneNote

NotebookLM

Tools & Technology Used

Frontend:	TypeScript with Vite (fast, modern web interface)
Backend:	Node.js with Express (server-side logic and API handling)
AI Integration:	Google Gemini API (document search and note generation)
Styling:	CSS
Deployment:	Vercel

NotebookLM

Advantages of the Proposed System

Time Saved: Speech-to-text and stylus input let doctors generate notes and retrieve patient histories instantly

Zero Lost Files: Fully digital workflows eliminate the risk of damaged or misplaced paperwork

Absolute Trust: The AI searches strictly within uploaded documents — guaranteeing reliable answers with zero hallucinations

Total Resilience: Operates fully offline, bypassing hospital network failures completely

All-in-One: Replaces multiple fragmented tools with a single, simple platform

NotebookLM

Disadvantages of Existing Systems

Tebra:	Frequent integration and usability issues that slow down workflows at critical moments
Elation Health:	Doctors must manually copy data just to generate a basic report
athenahealth:	Overcomplicated interface — built for large hospital systems, not independent practitioners

---

All existing platforms: Server and client failures make critical patient information unreachable — in medicine, downtime is never acceptable

NotebookLM

MediScribe gives every independent doctor what the big platforms never could — simplicity, reliability, and complete control over their practice, right in their pocket.

Speak a note. Find a file. Schedule a patient. All in one place. All offline. All yours.

We are not just about efficiency — we are about saving time, saving lives, and building careers.

MediScribe. Simple. Reliable. Built for the way you actually work.
